Experience

AI Engineer | Dare-RC| *Pandas, Scikit-learn, Mesa, FastAPI, Docker, GitHub Actions* Aug 2025 – Present

- Designed, developed, and deployed an agent-based Machine Learning model to simulate factors contributing to student dropout in Pakistan, achieving 91.88% accuracy for Lahore.
- Collaborated with CITY @ LUMS to integrate GIS-based mapping and spatial analysis into the dashboard for geographic visualization.
- Developed and deployed a psychometric dashboard that can process thousands of students' data accurately.

AI Engineer | ShipIn| *gRPC, AWS (ECS,ECR,S3), Kubernetes ,Rust, Flask* July 2024 – Aug 2025

- Developed and optimized an end-to-end KPI computation and data pipeline, redesigning calculations to eliminate unnecessary re-computation and updating data fetching to reuse existing results while processing only unavailable data, reducing computation time from 8 hours to under 4 hours through parallel processing.
- Designed and implemented a scalable tag management system for millions of ML-detected activities using gRPC and message brokering within a microservices architecture, enabling customer support teams to assign and manage tags through a web interface.
- Monitored and maintained production AI services using Grafana and Prometheus, troubleshooting backend and ML pipeline issues, resolving existing system issues, and improving overall system performance and reliability.

Python & Data Engineer| Turing | *Pandas, PyTorch, XGBoost,Transformers, FastAPI* Aug 2024 – May 2025

- Trained AI models in coding and data science using Reinforcement Learning with Human Feedback.
- Evaluated model-generated responses to coding and software engineering questions, ensuring accuracy, efficiency, and reliability

Software Engineer | Strategic Systems International| *.NET, RabbitMQ,Selenium* Jul 2023 – Aug 2024

- Developed and maintained software for PCB placement line control systems using C++ and C#, implementing new features and APIs to meet ASMPT's requirements and support efficient machine operations.
- Designed and implemented comprehensive automated test infrastructure, achieving 100% integration test coverage and at least 50% unit test coverage to ensure software reliability and reduce regressions across critical system components.

Education

Lahore University of Management Sciences (LUMS) Aug 2019 – June 2023

Bachelors of Science in Computer Science
Graduation with Distinction
Dean's Honor List: 2019-2020, 2020-2021, 2021-2022

Projects

AI Tutor | *Hugging Face, LLM, Ollama, DevOps, RAG, Agentic AI, FastAPI, LangChain*

- Developing an AI-powered tutor for a large school chain in Pakistan, aimed at providing personalized learning experiences to students based on the school's curriculum.
- Leading the pilot project to assess the AI tutor's impact on student learning, with plans to scale the solution across 150+ schools upon successful implementation.

Early detection of third-party abuse on Twitter | *Python, NumPy,Rest APIs, Sk-learn, pandas, SQL, json*

- Developed a machine learning model to detect abusive third-party applications on Twitter by analyzing early activity, significantly improving detection accuracy.
- Conducted a longitudinal study on third-party app abuse, contributing to the development of automated systems to detect and prevent malicious activities on social networks.
